PAPER FROM SUGAR CANE FIBER

PAPER FROM SUGAR CANE FIBER

PAPER FROM SUGAR CANE FIBER

Canefields eco-friendly sugarcane copy paper is independently third party certified Carbon Balanced by TerraPass. Look for the TerraPass logo on Canefields products. Funds from our carbon offset purchases are used to support US based renewable energy programs.

Canefields copy paper is made using sugarcane waste fiber, or ‘bagasse’. This fiber results in less dust build up on feed rollers and other machine components saving you money. Canefields paper performs well in all office machines for sustainable business printing.

Canefields sugarcane paper is acid free for archival quality. The paper will not yellow over time in storage.

Canefields Carbon Balanced sugarcane copy paper is manufactured at a landfill free facility that repurposes its solid waste for the production of high quality concrete, and adheres to robust policies for social responsibility.

Canefields sugarcane paper manufacturing facilities own and operate their own wind farm, producing renewable, green energy for production and energy supply to the grid.

Canefields paper is produced in an Elemental Chlorine Free (ECF) Closed Loop Water System. Process effluent (waste water) is purified at the mill owned treatment facility and reused for process water and to irrigate the otherwise arid surrounding lands.

Canefields sugarcane paper can be recycled with any other office paper. By using waste fiber from one industry to make a high quality, everyday product in another, Canefields is playing a role in addressing global climate change and preserving our natural environment.

Canefields manufacturing facilities make use of the “pith” from the sugarcane bagasse for energy. Pith is a contaminant that is removed from the sugarcane fiber during the papermaking process – this pith can be used to generate green energy instead of relying on oil.
